

## All your music at your fingertips

Musiteca is Pathos' ultimate source of music that puts together massive storage, uncompromised audio quality and user-friendly operation.

Its hard disk is capable of storing up to 25,000 tracks, approximately 2,500 CDs, with uncompressed quality. Digital music can be captured and stored either by ripping CDs via the built-in transport, or by copying files from any digital storage device—computer hard drive, USB drive, digital music player... Metafiles such as cover arts and detailed information are automatically acquired from the web and associated to the respective tracks.

Playing Musiteca is a multi-sensorial pleasure: its wide touch screen, combined with Pathos' proprietary intuitive interface, allow easy operation even by users with no familiarity with computers at all.

Musiteca's built-in 192KHz 24bit D/A converter makes analog signal available through a pair of XLR balanced outputs and a pair of RCA unbalanced connectors. The signal processing includes a FET high precision amplification stage and a buffer stage with ECC88 6922 tubes.

Musiteca can be remotely operated via any smartphone or tablet by means of specific free apps.
