

A new audio project always is to Pathos a good mission when there is the chance to reproduce the natural quality and the harmonic content of the original signal.

When we decided to redesign InPower, engineers' aim was exactly this one! Even if they knew it was not easy to improve the very first InPower. Improving, increasing the power and getting more quality was not an easy challenge to take, but we achieved it.

The result impressed the engineers themselves: an extremely musical sound, defined, a really "tube" sound, dynamic, full and fast; all these features make new InPower worth being part of the best solid states products.

To develop the new InPower we started from INPOL, a system patented by Pathos, which characterizes Pathos' production and that became an acclaimed success and won many awards.

INPOL units do have a strong sonic personality due to this exclusive circuitry, completely balanced in class A.

Further, new InPower allows enhancing a bi-amped setup at best, because of its adjustable gain; more specifically it allows operating on the bass level as you prefer.

Technical Specifications

Type	Entirely balanced, Double INPOL® power amplifier in pure class A
Feedback	Absent
Output power	120 W @ 8 Ohm
Gain Adjustable	21dB / 33dB
Input impedance	20 kOhm
Frequency response	5Hz ÷ 60kHz ± 0.3 dB
Signal/noise ratio	>100dB
THD	< 0.4% up to maximum power
Absorption at rest	350W
Dimensions	32x55x27cm
Weight	38Kg
